

Addendum I, CVR-4 Cover for AirMap® 1000

Since the manual was printed, a protective face cover has been added to the AirMap® 1000 package.

Using the Cover

This hard cover simply snaps on and off the front of the unit. If you store your unit in an aircraft or other vehicle, the cover protects the screen from damage that can result from long-term exposure to the sun's ultraviolet rays.

If you carry the unit with you in a flight bag or luggage, the cover protects against screen scratches. It also stops battery drain by preventing the Power button from being bumped and accidentally turning on the unit.

CVR-4 protective hard cover for AirMap 1000.

WARNING:

When the unit is mounted in an unprotected area, such as an open aircraft or boat cockpit, the protective face cover must be removed when the vehicle is moving at high speed. This includes towing a boat on a trailer at highway speeds. Otherwise, wind blast can pop off the cover.
